Graduate gameplay/software programmer with strong C++ foundations, growing C# experience, and hands-on industry experience delivering gameplay systems.

Work Experience

Freelance Programmer, *INFINITY27/PROTOGÉ* 2025 – 2026

Completed an Unreal Engine bootcamp and returned as a paid freelance developer, contributing gameplay features to a shipped Unreal Engine title *Samsara* .

- Designed and extended gameplay systems and enemy behaviours from prototype through to release.
- Collaborated with designers and directors in a sprint-based production environment, iterating on gameplay features throughout development.
- Debugged and improved combat logic through playtesting, sprint reviews, and designer feedback.
- Expanded the combat framework with a bull-charge ability, integrating the new behaviour cleanly into the existing architecture.

Projects

PitWall — C# / WPF / OpenF1 API 2026

- Built a C# WPF desktop application that transforms OpenF1 session data into an interactive Formula 1 replay.
- Combined multiple asynchronous data feeds into a single time-addressable replay timeline.
- Optimised PitWall's loading process, reducing replay load time by 93%.

Heart Garden — Unreal Engine 5 / C++ 2025

- Worked with an industry client to develop an interactive environment driven by real-time heart data.
- Implemented reactive environment systems that dynamically controlled environmental visuals and interactions using real-time heart data.
- Presented progress in client meetings and adapted features based on stakeholder feedback.

Low-Level 3D Renderer — PS4 Dev Kit / C++ 2025

- Developed 3D rendering features using a low-level graphics API on PS4 development hardware.
- Implemented Phong lighting alongside texture and mesh loading.
- Debugged rendering issues and analysed rendering performance throughout development.

Education

BSc (Hons) Games Computing — First-Class Honours 2023 – 2026
Northumbria University

BTEC Extended Diploma — Creative Digital Media (Games), DDM 2021 – 2023
Newcastle College

Skills

Languages
C++, C#

Engines
Unreal Engine, Unity

Frameworks
WPF, raylib, SDL2

Tools
Git, GitHub, Perforce, Visual Studio
