First-Class Games Computing graduate with hands-on C++ experience in a shipped Unreal Engine title and low-level graphics programming. Comfortable working within existing codebases and Agile teams.

Work Experience

C# Software Engineer Intern, *Grape Software* Aug 2026 – Present

Developing backend API services and frontend web applications using ASP.NET, Razor and Bootstrap.

- Contributing to web application development as part of a software engineering team.
- Completed onboarding in Grape Software's development workflows and C#/.NET technology stack.
- Adapted to existing development workflows and code practices.

Freelance Programmer, *INFINITY27/PROTOGÉ* Aug 2025 – Jan 2026

Paid freelance developer on the shipped title *Samsara* , contributing gameplay features within an existing C++ codebase.

- Designed and extended gameplay systems and AI behaviours from prototype through to release.
- Collaborated with designers and directors in a sprint-based environment, iterating on features through playtesting and feedback.
- Debugged combat logic and integrated a bull-charge ability into the existing combat framework.

Projects

Low-Level 3D Renderer — PS4 Dev Kit / C++ 2025

- Developed a 3D renderer in C++ using a low-level graphics API on PlayStation 4 development hardware, including Phong lighting and texture and mesh loading.
- Debugged rendering issues and analysed rendering performance throughout development.

Heart Garden — Unreal Engine 5 / C++ 2025

- Worked with an industry client to develop an interactive environment driven by real-time heart data.
- Implemented reactive environment systems that dynamically controlled environmental visuals and interactions using real-time heart data.
- Presented progress in client meetings and adapted features based on stakeholder feedback.

PitWall — C# / WPF / OpenF1 API 2026

- Built a C# WPF desktop application that transforms OpenF1 session data into an interactive Formula 1 replay.
- Combined multiple asynchronous data feeds into a single time-addressable replay timeline.
- Optimised PitWall's loading process, reducing replay load time by 93%.

Education

BSc (Hons) Games Computing — First-Class Honours 2023 – 2026

Northumbria University

Skills

Languages
C++, C#

Frameworks
WPF, raylib, SDL2

Tools
Git, Perforce, Visual Studio

Engines
Unreal Engine, Unity
